

Save and sure – ISOTEST®

## ISOTEST 4S<sup>plus</sup>

### Porosity Testing of Coatings

#### ISOTEST 4S<sup>plus</sup>

is indispensable in the area of passive corrosion protection

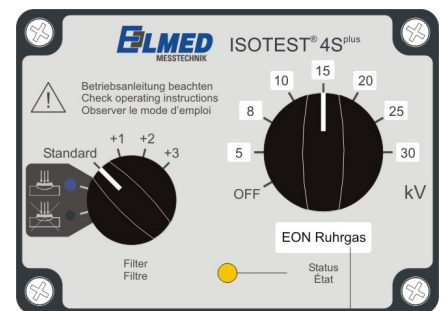

- Test voltage 5 – 35 kV
- 7 voltage steps of your choice

Sufficient reserves of energy for the most demanding requirements by means of impulse voltage technology

The patented automatic regulation guarantees a precise test voltage. Its robust, hard-wearing technology makes the ISOTEST 4S<sup>plus</sup> suitable for the rough and tumble of everyday testing. Its ease of use bears witness of the years of experience built into the instrument.

#### ISOTEST 4S<sup>plus</sup> stands for:

- ✓ Robust construction (can be used on building sites)
- ✓ Testing of dirty, damp and even slightly conductive surfaces
- ✓ Rapid battery change – on site
- ✓ Three earthing possibilities, including capacitance
- ✓ Testing of fully insulated objects
- ✓ Emergency off safety mode via switch
- ✓ No static charge when testing
- ✓ Automatic earth monitoring
- ✓ Minimal loading on material by using short test impulses

Including your company name on the front panel

#### Delivery includes:

- ISOTEST 4S<sup>plus</sup> test instrument complete with high voltage inspection probe including safety button
- Lead acid 6 V rechargeable battery – easy to change in its own compartment
- Charger 230 V, 50 Hz
- Earth cable 10 m with a robust clip and instrument plug with earth monitoring
- Strong plastic housing in a robust instrument bag complete with carrying strap
- Full operating instructions plus quick start guide
- Spare battery for safety button – fuses for rechargeable battery
- Works and calibration certificate

Part no.: 0141002001
